

Network Healthcheck

Your WAN transformation starts here!

Say goodbye to the 90s!

In 1999 the first MPLS WAN deployment was completed. The world has transformed in the last 24 years. MPLS technology has not. The WAN you're using to manage your business was created seven years before Amazon Web Services was launched, eight years before anyone had even heard of an iPhone, and nine years before Google was in Beta trial.

Fast forward to 2023

SD-WAN is a modern WAN architecture for a cloud-first approach. Unlike your network from the nineties, SD-WAN was created with the cloud in mind. It allows you to connect your users to the data and applications they need wherever they are. And it does that much more securely and efficiently than a traditional network.

Application Performance

Cost Reduction

Cloud Adoption

Flexibility

Security

Our offer to you

A full network audit with Kerv Connect's in-house network specialists covering:

- Estate profiles
- Technology deployments
- Contractual commitments
- Cloud connectivity
- Key applications
- Remote and mobile working
- Geographic footprint
- Business initiatives

5 days consultancy senior networking specialist

The Process

Client Workshops

Key Stakeholder Interviews

Technical Analysis

Commercial Analysis

Market Review

Recommendations Report & Presentation

The Outcome

This comprehensive audit will produce a bespoke report analysing your network estate, the markets you function in, challenges faced and strategy in place to achieve current objectives. The assessment will highlight current constraints and identify key areas for improvement and how these could be implemented, together with the tangible benefits these would deliver.

Why Kerv Connect?

Kerv Connect, a network and security managed solution provider, has a proven track record of helping customers navigate the brave new world of WAN transformation with multiple customer case studies across verticals.

66

As an early adopter of SD-WAN, we have benefited greatly from Kerv Connect's insight, experience, and credibility in this space. Kerv Connect has helped us realise our desire for an agile WAN which has improved cloud application performance and delivered savings.

Our initial engagement was to help us scope and plan an SD-WAN deployment, with a major drive to make our network more agile. Selecting a partner that was agile and dynamic was key to our selection criteria. Kerv Connect have proven to be both.

I have worked with Kerv Connect in a previous role and did not hesitate to engage with them at Kingfisher. Group services are a pivotal element of our overall strategy and Kerv Connect's approach has fully supported this endeavour. I look forward to a continued successful relationship.
