

Compliance Cloud

Kerv's Compliance Cloud is a comprehensive all-in-one compliance solution for the modern business communication landscape.

It captures, stores and allows easy access to every crucial communication, from voice to text, video or screen, across the diverse platforms that are integral to everyday operations – each with their own unique regulatory challenges.

This transformative technology is combined with expertise and support resources in a managed service designed to help businesses seamlessly navigate the obstacles and pitfalls of a complex and evolving regulatory environment with complete confidence.

Compliance doesn't have to be complicated

Non-compliance to stringent regulatory data capture and storage requirements results in costly financial and reputational implications. A single error can escalate into a comprehensive crisis, disrupting operations and inflicting long-term harm.

Reliably navigating the intricate, varied and often ambiguous rules across a range of communications platforms diverts valuable resources away from core operations.

Compliance Cloud seamlessly and proactively monitors all communications. By effortlessly interfacing with diverse environments in a single, secure, centralised solution, it frees IT teams to focus on business growth, innovation, and customer service.

Always-on automation, insightful analytics and secure storage

Innovative technology streamlines and automates the compliance process, pro-actively capturing a range of data modalities without the need for manual intervention.

Unique recording capabilities include accurate speech transcription in over 30 languages

CDR reconciliation to mitigate data discrepancies, and vigilant recording surveillance.

Intelligence Plus sentiment analysis provides emotional tone and context of conversations, allowing concerns to be addresses swiftly and boosting satisfaction.

Live and legacy data is encrypted for storage, ensuring maximum security in a compliant portal.

Support, expertise and understanding

Kerv Compliance Cloud combines cutting-edge technology and dedicated support services to expertly manage your compliance responsibilities.

Our bespoke and modular solutions offer comprehensive coverage of all communications with 24/7 monitoring and easy access via a unified dashboard for complete peace of mind.

Discover a world where compliance meets convenience. Contact us today to learn how Compliance Cloud can revolutionise your approach to data management and compliance.

Seamlessly navigate diverse platforms

- Microsoft Teams
- Contact centres
- Trader voice
- UC platforms
- Mobile devices

Complete communication compliance

- **Phone calls** – crystal clear audio is converted to secure WAV files.
- **Instant messages** – texts, emojis and shared files are logged in real-time.
- **Online meetings** – screen capture records actions carried out during calls for context.
- **Video calls** – high-definition video streams are coupled with audio capture for quality assurance.

Effortless alignment with complex regulatory requirements

- MiFID II
- GDPR
- EMIR
- PSD2
- HIPAA
- FINRA
